

Frontend Development

30-Day Roadmap — Tailwind Edition

Complete beginner to job-ready · 3 hours/day · 90 total hours · 8+ real projects

30

Days

3 hrs

Per day

90 hrs

Total study

8+

Projects

4

Weekly goals

What changed in this edition

- CSS reduced to 1 day of fundamentals only — just enough to understand what Tailwind does under the hood.
- Tailwind CSS introduced on Day 4 and used for ALL styling from that point forward.
- No CSS files, no class name headaches — just utility classes directly in your HTML and JSX.
- Week 4 covers Tailwind inside React — the exact workflow used in professional frontend jobs.
- You will finish with a React + Tailwind portfolio that looks modern and professional.

Overview

Week	Focus	Days	Key project
Week 1	HTML + CSS Fundamentals + Tailwind CSS	1–7	Pricing page (Tailwind)
Week 2	JavaScript Basics + DOM + Tailwind Components	8–14	Quiz game app
Week 3	JavaScript Advanced + APIs + Git	15–21	Movie search app
Week 4	React + Tailwind + Portfolio + Job Prep	22–30	Deployed portfolio

How to use this roadmap

- Follow the weeks in order — each builds directly on the previous.

- Day 3 is your only raw CSS day. After that, everything is Tailwind.
- Use Tailwind Play (play.tailwindcss.com) in the browser — no setup needed for week 1.
- From week 2 onwards, set up Vite + Tailwind locally for a real dev environment.
- Push every project to GitHub as you build — your portfolio starts on day 1.
- The 30-minute daily challenge is the most important part. Never skip it.
- By day 30: live portfolio, 8+ deployed projects, React + Tailwind skills.

Week 1 — HTML + CSS Fundamentals + Tailwind CSS

Days 1–7

Weekly Goal

By end of week 1 you can build any static webpage using HTML and Tailwind CSS. You understand the box model, flexbox, and responsive design concepts well enough to use Tailwind confidently — because Tailwind's utilities are just CSS shorthand under the hood.

WHAT TO BUILD THIS WEEK

Personal profile page (Tailwind)	Pricing card component	Responsive nav bar
----------------------------------	------------------------	--------------------

DAY-BY-DAY TOPICS & 30-MINUTE PRACTICE SESSION

Day	Topic	Practice session
Day 1	HTML structure & tags	Build a bio page with headings, paragraphs, images & links
Day 2	HTML forms & tables	Build a contact form with inputs, labels & a data table
Day 3	CSS fundamentals only: box model, flexbox & responsive concepts	Style your bio page with raw CSS once — margin, padding, flex. This is your ONLY raw CSS day.
Day 4	Tailwind CSS setup + core utility classes	Rebuild your bio page using only Tailwind classes. Compare side by side with day 3.
Day 5	Tailwind: flexbox, spacing, typography & colors	Build a card grid fully in Tailwind — zero custom CSS
Day 6	Tailwind: responsive prefixes (sm: md: lg:) + hover & focus states	Make your card grid mobile-friendly using Tailwind breakpoints only
Day 7	Review + Tailwind mini project	Build a full pricing page using only HTML + Tailwind, no custom CSS allowed

YOUR 3-HOUR DAILY STRUCTURE

0–30 min	Concept study — read Tailwind docs or watch one focused video
30–90 min	Guided coding — type every class by hand, use Tailwind Play in the browser
90–150 min	Practice build — code the day's project from a blank file
150–180 min	30-min challenge — rebuild a real site section in Tailwind only

30-Min Daily Challenge

Pick any website section (hero, footer, pricing card) and rebuild it using only HTML + Tailwind. No custom CSS allowed. Compare your result to the original.

Week 2 — JavaScript Basics + DOM + Tailwind Components

Days 8–14

Weekly Goal

By end of week 2 you can write JavaScript to manipulate the DOM, handle user events, and make pages interactive — all styled with Tailwind. You understand variables, functions, loops, arrays, and objects.

WHAT TO BUILD THIS WEEK

Animated Tailwind landing page	To-do list app (Tailwind styled)	JS quiz game
--------------------------------	----------------------------------	--------------

DAY-BY-DAY TOPICS & 30-MINUTE PRACTICE SESSION

Day	Topic	Practice session
Day 8	Tailwind advanced: animations, transitions & custom config	Animate a button and build an animated hero section with Tailwind
Day 9	JS variables, types & operators	Solve 5 console exercises — no DOM yet, just pure logic
Day 10	Functions, conditionals & loops	Build a tip calculator with user input and JS logic
Day 11	Arrays & objects	Filter and display a product list from a JS array
Day 12	DOM manipulation	Build a to-do list — add, complete, delete items — styled with Tailwind
Day 13	Events & listeners	Build a 10-question quiz game with score tracking
Day 14	Review + combine JS + Tailwind	Rebuild the quiz with polished Tailwind UI and smooth transitions

YOUR 3-HOUR DAILY STRUCTURE

0–30 min	Concept study — open browser console alongside docs
30–90 min	Hands-on coding — type every example; breaking things intentionally is fine
90–150 min	Practice build — complete the day's mini project
150–180 min	30-min challenge — add a new JS feature + Tailwind style to yesterday's project

30-Min Daily Challenge

Take any project and break it intentionally — remove a function, change variable types — then debug your way back. This builds real intuition fast.

Week 3 — JavaScript Advanced + APIs + Git

Days 15–21

Weekly Goal

By end of week 3 you can write modern ES6+ JavaScript, fetch live data from real APIs using async/await, handle errors gracefully, and manage your code on GitHub. All your projects are styled with Tailwind.

WHAT TO BUILD THIS WEEK

Weather app (live API + Tailwind UI)	GitHub profile finder	Movie search app
--------------------------------------	-----------------------	------------------

DAY-BY-DAY TOPICS & 30-MINUTE PRACTICE SESSION

Day	Topic	Practice session
Day 15	ES6+: arrow functions, destructuring, spread & rest	Refactor all week 2 code to ES6+ syntax
Day 16	Modules & imports/exports	Split your to-do app into separate JS module files
Day 17	Promises & fetch basics	Fetch and display data from a public joke API
Day 18	Async/await & error handling	Build a weather app using OpenWeatherMap API with Tailwind UI
Day 19	Git & GitHub fundamentals	Push all projects to GitHub with proper commit messages
Day 20	Local storage & JSON	Persist to-do list data across browser refreshes
Day 21	Review + API capstone	Build a movie search app using OMDB or TMDb API, Tailwind styled

YOUR 3-HOUR DAILY STRUCTURE

0–30 min	Concept study — async patterns trip up most beginners; go slow here
30–90 min	Build — implement the concept step by step in your own project
90–150 min	API project work — add new data-driven features each session
150–180 min	30-min challenge — read real open-source JS on GitHub and explain it aloud

30-Min Daily Challenge

Pick any public API (PokeAPI, OpenWeatherMap, REST Countries) and build a mini app that fetches, filters, and neatly displays data with a polished Tailwind UI — all from scratch.

Week 4 — React + Tailwind + Portfolio + Job Prep

Days 22–30

Weekly Goal

By day 30 you can build full React apps with components, props, state hooks, routing, and Tailwind styling. You have a live deployed portfolio with 3+ real projects and can answer common frontend interview questions confidently.

WHAT TO BUILD THIS WEEK

React task manager (Tailwind)	Full portfolio site	Deployed capstone project
-------------------------------	---------------------	---------------------------

DAY-BY-DAY TOPICS & 30-MINUTE PRACTICE SESSION

Day	Topic	Practice session
Day 22	React intro: JSX, components & props	Rebuild your to-do list as a React + Tailwind component tree
Day 23	State & useState hook	Add interactive features — toggle, counter, live form input
Day 24	useEffect & data fetching in React	Fetch API data inside a React component, display with Tailwind
Day 25	React Router: multi-page apps	Add Home, Projects, and Contact pages with navigation
Day 26	Forms & controlled components	Build a fully controlled React contact form
Day 27	Tailwind in React: best practices + component patterns	Polish your entire React app — consistent design system
Day 28	Deploy to Vercel or Netlify	Deploy all your projects with live public URLs
Day 29	Portfolio site build	Build and publish your personal portfolio in React + Tailwind
Day 30	Interview prep & final review	Mock technical interview + review all key concepts

YOUR 3-HOUR DAILY STRUCTURE

0–30 min	Concept study — React official docs at react.dev are excellent
30–90 min	Build — implement the concept in your ongoing React + Tailwind project
90–150 min	Portfolio work — every session should add something deployable
150–180 min	30-min challenge — explain today's concept out loud as if teaching it

30-Min Daily Challenge

Record yourself explaining a React concept (state, useEffect, props) in under 3 minutes. Watching it back reveals gaps you didn't know existed — fix them next session.

Job-Ready Checklist & Final Tips

By day 30 you should have:

- [] A GitHub profile with all 8+ projects committed and documented with README files
- [] A live portfolio website in React + Tailwind, deployed on Vercel or Netlify
- [] At least 3 React projects with real API integrations and clean Tailwind UI
- [] Ability to explain every project confidently — what it does, how you built it, what you learned
- [] Answers prepared for the 8 interview questions below

Top interview topics to prepare

- What is the difference between `==` and `===` in JavaScript?
- Explain the concept of closures with an example.
- What is the virtual DOM and how does React use it?
- What is the difference between state and props in React?
- How does `async/await` work? What problem does it solve?
- What is the CSS box model? How does padding differ from margin?
- Explain the JavaScript event loop.
- How do you optimize a slow-loading webpage?

Where to find jobs (Nigeria + remote)

LinkedIn — [linkedin.com](https://www.linkedin.com) — set location to Remote, apply globally

Andela — andela.com — Africa-focused, strong network for Nigerian developers

Toptal — [toptal.com](https://www.toptal.com) — competitive and high pay, worth applying after 3–6 months experience

Remote OK — remoteok.com — curated remote tech jobs, updated daily

Jobberman — [jobberman.com](https://www.jobberman.com) — Nigeria's leading job board

Upwork — [upwork.com](https://www.upwork.com) — freelance projects to build experience and earn while learning

What to learn next (after day 30)

- TypeScript — adds type safety to JavaScript, expected in most frontend job listings
- Next.js — full-stack React framework, extremely in-demand in 2024+
- Testing — Jest + React Testing Library basics
- State management — Zustand (simple) or Redux Toolkit (larger apps)
- Node.js basics — useful for understanding the full stack and backend APIs
- Framer Motion — polished animations in React, great for portfolio projects
